Title:Brane-World Gravity. Brane-World Gravity. The observable universe could be a 1+3-surface (the "brane") embedded in a 1+3+\textit {d}-dimensional spacetime (the "bulk"), with Standard Model particles and fields trapped on the brane while gravity is free to access the bulk. At least one of the \textit {d} extra spatial dimensions could be very large relative to the Planck scale, which lowers the fundamental gravity scale, possibly even down to the electroweak (TeV) level.

This is the concept behind braneworld theory, which says that our four dimensional spacetime is like the sheet of paper, simply a subspace of some bigger, multi-dimensional space that we cannot perceive because all matter and forces (except possibly gravity) we experience are constrained to this subspace, or brane (as in, membrane).

Why gravity is weak and the cosmological constant is small. Some versions of brane cosmology, based on the large extra dimension idea, can explain the weakness of gravity relative to the other fundamental forces of nature, thus solving the hierarchy problem.

An animation of gravity at work. Albert Einstein described gravity as a curve in space that wraps around an object—such as a star or a planet. If another object is nearby, it is pulled into the curve. Image credit: NASA. Anything that has mass also has gravity. Objects with more mass have more gravity. Gravity also gets weaker with distance.

Gravity, in mechanics, the universal force of attraction acting between all matter. It is by far the weakest force known in nature and thus plays no role in determining the internal properties of everyday matter. Yet, it also controls the trajectories of bodies in the universe and the structure of the whole cosmos.
