Geotechnical Engineering Laboratory as shown in Figure below has various equipments that can be used for laboratory tests in soil mechanics and geotechnical field analysis. Some of the equipments are: Civil Engineering students usually use Geotechnical Engineering Laboratory during their Mechanics of Soil I and II (SI-2221, SI-3121) course. The equipment in the Laboratory are shown below:

It is a process in which a soil sample undergoes a volumetric change due to the application of some type of loading. Placing a load on a soil sample results in a reduction in the void space within the soil. In the laboratory, this load can be applied pneumatically or by simply placing weights on the sample.

Soil Mechanics Lab. Soil is one of the very important engineering materials.

Determination of soil conditions is the most significant task in every civil engineering activity. Properties of the soil can be determined by both field and laboratory test methods. It is critical to quantify the
