[A To Fractional T1 - builder 2.hpd-collaborative.org](http://2.hpd-collaborative.org)

Fractional T1 is a fraction or part of a T1 line. In data transmission, T1 is one of the many kinds of transmission lines that transport high-quality data at a lightning-fast rate. A T1 line has 24 channels, each of which can transfer data at a speed of 64 kilobytes per second. In a fractional T1 line, only a part of the 24 channels are being rented out.

a customer to use only a certain number of the 24 channels on a T1 line. In a sense, the customer who pays for this type of line is renting the use of those channels. This kind of business decision certainly makes sense if the customer requires only a few channels, yet wants to take advantage of the speed, precision, and security that a T1 line delivers.

In this scenario, there are two easy options: use a fractional T1 service and devote three to eight channels for voice "tie lines" to the home office and use the rest for data, or use a full T1 for data, and run the voice traffic over IP.

T1 vs. VoIP for branch office connectivity

A Fractional T-1 takes a number of the 24 channels and only uses a part of the total, hence the term "fractional". For example, each 2 channels can transmit data at 128 kilobits per second. This gives a user a reliable, always available
