This is a substantial new edition of a successful textbook which continues to have a sensible and 'easy to read' style. Each Chapter has a past/present/future theme with a real strategic approach. Only when managers understand their operations will they be able to leverage them into any sort of capabilities that will lead to competitive advantage. Online tutor resource materials accompany the book.

An Applied Guide to Process and Plant Design, 2nd edition, is a guide to process plant design for both students and professional engineers. The book covers plant layout and the use of spreadsheet programs and key drawings produced by professional engineers as aids to design; subjects that are usually learned on the job rather than in education. You will learn how to produce smarter plant design through the use of computer tools, including Excel and AutoCAD, "What If Analysis, statistical tools, and Visual Basic for more complex problems. The book also includes a wealth of selection tables, covering the key aspects of professional plant design which engineering students and early-career engineers tend to find most challenging. Professor Moran draws on over 20 years' experience in process design to create an essential foundational book ideal for those who are new to process design, compliant with both professional practice and the IChemE degree accreditation guidelines. Includes new and expanded content, including illustrative case studies and practical examples Explains how to deliver a process design that meets both business and safety criteria Covers plant layout and the use of spreadsheet programs and key drawings as aids to design Includes a comprehensive set of selection tables, covering aspects of professional plant design which early-career designers find most challenging

Case studies of 27 plant shutdowns during the past two decades are summarized and analyzed. The organization of this research summary follows the plant-closing event in a chronological fashion. In the first section is considered the state of plant-closing research and the concerns and options of the groups involved in a shutdown. A second chapter views the management decision in a series of economic contexts: international, national, and local. Next, the immediate and intermediate responses of management, the union or unions, and the community are considered, together with some related material about recent state and federal legislative initiatives and a brief outline of how European countries respond to economic dislocation. The second half of the volume (chapters 4-6) is concerned with the experiences of the displaced workers, their job search behaviors and subsequent labor market experiences, their participation in programs designed to facilitate reemployment and the outcomes of those programs, and the effects of job loss on mental health. A concluding section reflects upon the aims and objectives set out earlier and proposes concrete research projects as well as a general research agenda. It also summarizes the research findings and outlines the implications for policy and practice. (YLB)
