John Norman has updated his best-selling book, a guide for the firefighter and fire officer who, having learned the basic mechanics of the trade, are looking for specific methods for handling specific situations. In this new fourth edition, readers will find a new chapter on lightweight construction, a new chapter on electrical fires and emergencies, updates to many chapters including such topics as wind-driven fires, and many new illustrations.

Learn How to Make tvOS Apps! The tvOS Apprentice teaches you everything you need to know to develop great apps for the Apple TV. This book teaches you how to make tvOS apps in two different ways: via the traditional method using UIKit, and via the new Client-Server method using TVML. For both complete beginners and iOS pros! Topics Covered in the tvOS Apprentice Architecture: There are two different ways to make apps for the Apple TV - learn which is best for you. TVML: Learn how to use TVML templates to implement beautiful interfaces for the Apple TV. TVJS: Learn how to use Javascript to manipulate the TVML DOM. Traditional Apps: Learn how to make traditional app using native libraries. Focus: Learn how the Focus paradigm works and what it means for your apps. Animation: Get ready to add some delightful animation to your tvOS apps! User Input and the Controller: Learn how your app can interact with the new Apple TV remote. Video Playback: Get your Apple TV app to play video - a common requirement for tvOS apps. On Demand Resources: Learn how to download assets on the fly. CloudKit: Learn how to use CloudKit on tvOS to store your app's data. In App Purchase: Monetize your app by allowing users to purchase digital goods. tvOS Design: Learn how to design your apps to fit in well with the tvOS ecosystem. Creating Layered Images: Find out how to create a new kind of image specifically for the TV. The Top Shelf: Show off static and interactive content on the Top Shelf of your Apple TV. And Much More: Including the new Dark Mode, PhotoKit, and Multipeer Connectivity!

Knowledge-based Configuration incorporates knowledge representation formalisms to capture complex product models and reasoning methods to provide intelligent interactive behavior with the user. This book represents the first time that corporate and academic worlds collaborate integrating research and commercial benefits of knowledge-based configuration. Foundational interdisciplinary material is provided for composing models from increasingly complex products and services. Case studies, the latest research, and graphical knowledge representations that increase understanding of knowledge-based configuration provide a toolkit to continue to push the boundaries of what configurators can do and how they enable companies and customers to thrive. Includes detailed discussion of state-of-the art configuration knowledge engineering approaches such as automated testing and debugging, redundancy detection, and conflict management Provides an overview of the application of knowledge-based configuration technologies in the form of real-world case studies from SAP, Siemens, Kapsch, and more Explores the commercial benefits of knowledge-based configuration technologies to business sectors from services to industrial equipment Uses concepts that are based on an example personal computer configuration knowledge base that is represented in an UML-based graphical language

The International Gesture Workshops (GW) are interdisciplinary events for those researching gesture-based communication across the disciplines. The focus of these events is a shared interest in understanding gestures and sign language in their many facets, and using them for advancing human-machine interaction. Since 1996, International Gesture Workshops have been held roughly every second year, with fully reviewed proceedings published by Springer. The International Gesture Workshop GW 2009 was hosted by Bielefeld University ' s Center for Interdisciplinary Research (ZiF – Zentrum für interdisziplinäre Forschung) during February 25–27, 2009. Like its predecessors, GW 2009 aimed to provide a platform for participants to share, discuss, and criticize recent and novel research with a multidisciplinary audience. More than 70 computer scientists, linguistics, psychologists, neuroscientists as well as dance and music scientists from 16 countries met to present and exchange their newest results under the umbrella theme " Gesture in Embodied Communication and Human-Computer Interaction. " Consistent with the steady growth of research activity in this area, a large number of high-quality submissions were received, which made GW 2009 an exciting and important event for anyone interested in gesture-related technological research relevant to human-computer interaction. In line with the practice of previous gesture workshops, presenters were invited to submit theirs papers for publication in a subsequent peer-reviewed publication of high quality. The present book is the outcome of this effort. Representing the research work from eight countries, it contains a selection of 28 thoroughly reviewed articles.

Based on a foundation of science and empirical observation, engineering research and design has brought science fiction into science fact. The convergence of neuroscience and technology is facilitating the development of therapies that not long ago would have seemed unimaginable, if not impossible. With contributions from pioneers in industry, academia, and clinical medicine, Neuroengineering provides an understanding of the history, physiology and the most promising engineering technologies. The book presents clinical applications of neuromodulation and a detailed review of the science and mechanisms of action underlying deep brain stimulation. Contributions include discussions of seizure control, clinical, surgical, and technological aspects of responsive neurostimulation, and a thorough review of spinal cord stimulation for pain control. The book highlights promising technologies and applications for neural augmentation, brain and computer interfaces, and motor prostheses. It concludes with coverage of the science underlying current neurostimulation techniques and new paradigm-shifting neuromodulation technologies. We are on the cusp of a technological revolution that promises to have more of an impact on human health, disease, and quality of life than any other in recent history. Its impact on medicine and society promises to be as dramatic as that of the development of antibiotics. The transition of neural engineering from basic research to intense commercialization and widespread clinical application and acceptance is just around the corner. Providing in-depth coverage of cutting-edge developments in technology and clinical practice, the book presents detailed descriptions of technologies, science, and clinical results that build a foundation for the future.

Tackling a growing challenge in today ' s schools, experienced educators Lineburg and Gearheart present an honest picture of how poverty affects students, families, and the school community at large. They offer a host of practical applications that can be used in every school district in America to meet those challenges head-on! Written for preK–12 teachers, leaders, and staff, Educating Students in Poverty provides essential strategies to help socioeconomically disadvantaged students achieve academic and lifelong success. Backed up with firsthand experiences and relevant research, these proactive instructional and administrative approaches cover a variety of topics, including: Advocating for underprivileged students Improving school climate and culture Engaging and communicating with families Instructional techniques and discipline issues Student health and safety This book is a must-have resource for any educator whose goal is to maximize the learning potential of every student.
