**Heart Health and Aging | National Institute on Aging**

Cardiovascular pathologies such as hypertension and cerebrovascular disease, and heart diseases such as coronary artery disease, arrhythmias, and heart failure, increase in incidence with increasing age. w1 The aging process itself also effects the cardiovascular system.

**Heart disease in the elderly | Heart**

Cardiovascular disease is the major cause of death and disability in the elderly. Atherosclerotic coronary heart disease is the most prevalent problem, followed by hypertensive cardiovascular disease. Calcific aortic stenosis is the most common haemodynamically important valvular lesion; surgical correction significantly improves the prognosis.

**Cardiovascular disease in the elderly**

Systolic hypertension is the most common cause of hypertension in patients over the age of 50, which is significant because it is a much greater risk factor for heart disease and stroke compared to other forms of primary hypertension. It is also associated with an increased risk of mortality from cardiovascular events.

**Hypertension and Cardiovascular Disease in the Elderly**

Cardiovascular and coronary heart disease are the chief contributors to the disease burden.1 National figures show that rates increase markedly with age for both males and females (Australian Institute of Health and Welfare 2004). In 2001, almost two-thirds of people with coronary heart disease (CHD) were aged 65 years and over (Figure 4.2).

**Department of Health | 4.3 Cardiovascular disease**

Congestive heart failure is also very common in older people. In people older than 75, congestive heart failure occurs 10 times more often than in younger adults. Coronary artery disease is fairly common. It is often a result of arteriosclerosis. High blood pressure and orthostatic hypotension are more common with older age.

**Aging changes in the heart and blood vessels: MedlinePlus**

Heart and circulatory disease, also known as cardiovascular disease (CVD), causes a quarter of all deaths in the UK. Cardiovascular disease is the single biggest condition where lives can be saved by the NHS over the next 10 years. Through our Long Term Plan we will identify more people with heart

**NHS Long Term Plan » Cardiovascular disease**

Cardiovascular disease (CVD), also called heart and circulatory disease, is an umbrella name for conditions that affect your heart or circulation. These include high blood pressure, stroke and vascular dementia. Heart disease includes conditions that narrow or block blood vessels (coronary heart disease).

**Cardiovascular Disease (CVD) — types, causes & symptoms**

age - CVD is most common in people over 50 and your risk of developing it increases as you get older gender - men are more likely to develop CVD at an earlier age than women diet - an unhealthy diet can lead to high cholesterol and high blood pressure

**Cardiovascular disease — NHS**

CVD includes all heart and circulatory diseases, including coronary heart disease, angina, heart attack, congenital heart disease, hypertension, stroke and vascular dementia. CVD affects around seven million people in the UK and is a significant cause of disability and death

**NHS England » Cardiovascular disease (CVD)**

Two studies published in The Lancet look at cholesterol, cardiovascular disease, and statins in older people. Prof Sir Nilesh Samani, Medical Director at the British Heart Foundation, said: “Many clinical trials have shown that statins reduce heart attacks and strokes, but question marks have remained about how helpful they are in older people.

**expert reaction to two studies looking at cholesterol**

Wednesday, November 13, 2019 (HealthDay News)-Researchers say regular exercise reduces the risk of heart disease and stroke in the elderly, even with health problems such as high blood pressure and diabetes. I have. For a new study, researchers analyzed data from more than one million people over the age of 60 in South Korea. The ...
