### How to coach your child

Although executive function difficulties are often addressed in school-age children, there are few resources showing how to help these individuals when they are older. This book presents a dynamic coaching model that helps college students become self-regulated learners by improving their goal-setting, planning, time management, and organizational skills. Ideal for use with students with attention-deficit/hyperactivity disorder (ADHD), learning disabilities, acquired brain injury, and other challenges, Mary R. T. Kennedy's approach incorporates motivational interviewing and emphasizes practical problem solving. User-friendly features include numerous concrete examples, sample dialogues, and print and online resource listings. In a large-size format for easy photocopying, the book contains 21 reproducible forms. Purchasers get access to a Web page where they can download and print the reproducible materials for repeated use.

NEW contributors — leading experts in the field — update the book's content.

There is a tendency to assume that teams will naturally know how to self-organise and optimise their collective talents. This thoughtful and engaging book explores the practicalities of coaching teams and some of the challenges that naturally occur because of who we are as human beings. Part of The Professional Coaching Series, this book challenges the assumption that self-organising teams will work in all settings, answering some of the recurring questions and challenges observed in many organisations. How do we connect with each other, so we create trust? How do we work through conflict and see it as part of a natural ebb and flow in relationships? How do we create meaningful work in the context of an ever-changing environment? The opening chapter lays out some basic team coaching principles to help set the stage for coaching people in teams and there are coaching questions in each chapter to engage the reader, as well as tools they can use immediately. Coaching teams is more than just applying coaching skills. It requires a deep understanding of how people behave and an adaptive approach to coaching. This book provides both research references and practical tools to help team coaches start their team coaching journey.

Covering common pulmonary function tests and techniques, Ruppel's Manual of Pulmonary Function Testing, 10th Edition is not only an authoritative, on-the-job reference, but an excellent resource for preparing for the CPFT (certified pulmonary function technologist) and RPFT (registered pulmonary function technologist) specialty credentialing examinations. It includes information on pathophysiology, equipment, and quality assurance, so you can develop the testing skills you need to find and assess lung abnormalities and conditions including asthma, chronic bronchitis, emphysema, and cystic fibrosis. Written by Carl Mottram, RRT, RPFT, FAARC, one of the most respected experts in pulmonary function procedures, this text helps you get accurate test results every time. Case studies provide problem-solving challenges for common clinical cases, including each case history, PFT testing results, a technologist's comments, and questions and answers. PFT Tips boxes highlight and reinforce the most important Pulmonary Function Testing information in every chapter. Entry- and Advanced-Level objectives follow the content guidelines suggested by the CPFT and RPFT exam matrices from the National Board for Respiratory Care (NBRC). Concise chapter outlines introduce the topics to be covered. Key terms are listed at the beginning of each chapter, bolded in the text, and defined in an expanded glossary. New Bronchoprovocation chapter features important information on methacholine, histamine, mannitol, exercise challenges, and eucapnic voluntary hyperventilation. New chapter on reference equations simplifies common reference equations and includes normal and abnormal values encountered in the clinical setting. New How To boxes provide step-by-step guidelines to performing pulmonary function tests, taking the guesswork out of completing accurate and result-producing tests. New NBRC-CPFT mapping prepares you for the certified pulmonary function technologist credentialing examination, correlating content to test items in the NBRC-CPFT testing matrix. New Clinical Scenario lecture slides provide in-depth case analysis with figures, charts, lab values, and documented research. New author Carl Mottram, a leading respiratory care expert who contributed to this book's previous two editions, is the Technical Director of the Pulmonary Function Labs and Rehabilitation at the Mayo Clinic and is an Associate Professor of Medicine at the Mayo Clinic College of Medicine and a highly sought-after lecturer at national and international symposiums and conferences.

This is your complete step-by-step guide to effective coaching as an organizational leader and supervisor. Use this workbook to read about what it takes to be an effective coach for employees. This book shares everything you need to know about helping employees reach their peak potential and is based upon the latest research and models. Read the short lessons, reflect, then build your skills by doing the short writing assignments at your own convenience. All leaders in modern organization need coaching training to move away from the tendency to micromanage. It has been long established that micromanagement does not work, and in fact displays the sense of leader's distrust in employees? ability to do their jobs. This new graduate level textbook, Cognition and Acquired Language Disorders: An Information Processing Approach, addresses the cognitive aspects of language and communication. It assembles the most recent information on this topic, addressing normal cognitive processing for language in adults, the cognitive impairments underlying language disorders arising from a variety of neurologic conditions, and current assessment and treatment strategies for the management of these disorders. The text is organized using an information processing approach to acquired language disorders, and thus can be set apart from texts that rely upon a more traditional, syndrome-based approach (e.g., stroke, dementia, and traumatic brain injury). This approach facilitates the description and treatment of acquired language disorders across many neurologic groups when particular cognitive deficits are identified. Other useful features of the text include assessment and treatment protocols that are based on current evidence. These protocols provide students and clinicians a ready clinical resource for managing language disorders due to deficits in attention, memory, linguistic operations, and executive functions. Unique process-oriented approach organizes content by cognitive processes instead of by syndromes so you can apply the information and treatment approaches to any one of many neurologic groups with the same cognitive deficit. Cognitive domains are described as they relate to communication rather than separated as they are in many other publications where they are treated as independent behaviors. A separate section on normal processing includes five chapters providing a strong foundation for understanding the factors that contribute to disordered communication and its management. The evidence-based approach promotes best practices for the most effective management of patients with cognitive-communication disorders. Coverage of the cognitive aspects of communication helps you meet the standards for certification in speech-language pathology. A strong author team includes two lead authors who are well known and highly respected in the academic community, along with expert contributors, ensuring a comprehensive, advanced clinical text/reference.

In a rapidly moving world where so many of our day-to-day activities are now online, it has become essential to adapt coaching processes in order to better suit clients' circumstances and needs. Above all, clients want sustainable and time-efficient results. Electronic coaching (e-coaching) is an inevitable development for every professional who coaches, mentors, teaches, supervises, guides or helps people in their jobs. The book is underpinned by a theoretical framework that introduces a new model of people development (the ABC model), inspired by Graham Alexander's GROW model, and a new text-based coaching method inspired by Brown and Levinson's politeness theory. E-coaching is practical in its approach, with explanations on safeguarding the security and privacy of your clients, how to calculate rates, managing expectations and other important aspects of coaching online. The first English-language text available on e-coaching, this book presents a unique combined approach of method and technique, supplemented with a sample e-coaching programme. It is a must-read for all coaches, mentors, supervisors, teachers or HR professionals who want to coach in a modern way, as well as students studying on coaching courses.
