What would it be like to see the whole history of the universe, from the moment of creation to the farthest future? Deep Time shows us - through the eyes of a single particle that emerges from the fires of genesis then journeys across countless billions of years to glimpse the ultimate fate of the cosmos. Along the way, we watch the formation of stars and galaxies, narrowly avoid falling into a black hole, witness the birth of the sun and earth, trace the evolution of life and intelligence, and blast off into space again with our particle now part of the Voyager 2 spacecraft. Then we travel on, across immense vistas of space and time, toward the end of all things - and a strange new beginning."

David Darling is the author of about 50 books, including narrative science titles Megacatastrophes!, We Are Not Alone, Gravity's Arc, Equations of Eternity, a New York Times Notable Book, and Deep Time. He is also the author of Teleportation: The Impossible Leap, Zen Physics, The Universal Book of Astronomy, The Complete Book of Spaceflight, and The Universal Book of Mathematics, as well as more than 30 children's books. His articles and reviews have appeared in Astronomy, Omni, Penthouse, New Scientist, the New York Times, and the Guardian among others. He has lectured widely, including at the Royal Institution in London. David Darling was born in Glossop, Derbyshire, England, lived in the United States for many years, and now lives in Dundee, Scotland. He earned his B.Sc. in physics from Sheffield University in 1974 and his Ph.D. in astronomy from Manchester University in 1977. David Darling is also a professional singer/songwriter and runs a major science website. Please visit the Worlds of David Darling - www.daviddarling.info Keywords - Universe, Astrophysics, Astronomy, Particle, Space, Cosmos, Evolution, David Darling, Sun, Earth, Travel

In a dazzling, lyrical mixture of science and philosophy, acclaimed science writer David Darling makes a provocative case for the workings of human consciousness, its origins, and its destiny when the next Big Bang precipitates a quantum leap in evolution. Equations of Eternity rethinks thought and the existence of intelligence in a way that will give readers a lot to think about.

An authoritative, entertaining examination of the ultimate thrill ride Until recently the stuff of sci-fi fiction and Star Trek reruns, teleportation has become a reality-for subatomic particles at least. In this eye-opening book, science author David Darling follows the remarkable evolution of teleportation, visiting the key labs that have cradled this cutting-edge science and relating the all-too-human stories behind its birth. He ties in the fast emerging fields of cryptography and quantum computing, tackles some thorny philosophical questions (for instance, can a soul be teleported?), and asks when and how humans may be able to "beam up."

Acclaimed astrophysicist David Darling comes well-armed with both science and mysticism to provide a theory of consciousness and its final conclusion. The science of death and the logic of reincarnation give pause to our current thinking process. Yet, after reading this book you can nod our head in understanding and move on, more mature perhaps in knowing we do live on in some sense. Just not in the way we most wished for.

To many people, the main question about extraterrestrial life is whether or not it exists. But to the scientific community, that question has already been answered: It does. So confident are scientists of the existence of life on other planets that they've invested serious amounts of money, time and prestige in finding and studying it. NASA has started an Institute of Astrobiology, for instance, and the University of Washington, Seattle, began in September 1999 to accept graduate students into its Department of Astrobiology. Life Everywhere is the first book to lay out for a general reader what the new science of astrobiology is all about. It asks the fascinating questions researchers are asking themselves and one another: u What is life? u How does it originate? u How often does life survive once it arises?u How does evolution work?u What determines whether complex or even intelligent life will emerge from more primitive forms?Informed by interviews with most of the experts in this nascent subject, Life Everywhere introduces readers to one of the most important scientific disciplines of the coming century.

The possibility of life on other worlds has stirred the human imagination and stimulated scientific curiosity for as long as people have been looking up at the sky. From Aristotle to Star Trek to the latest pictures from the Hubble Space Telescope, the examination of this age-old question continues to arouse profound excitement and has found expression in human culture from the first cosmologies to the latest theories about the origin of life -- in oral tradition, literature, and film, and in the rapidly developing disciplines of astrobiology, space exploration, and extrasolar planet detection. David Darling draws together the many threads of the search for extraterrestrial life in his comprehensive and entertaining guide. His one-of-a-kind resource covers everything from the Arecibo Message; brown dwarfs; cell membranes; Dyson spheres; and extremophiles to biographical portraits of leading scientists, such as Carl Sagan and Jill Tarter; philosophers, such as René Descartes and William Whewell; and science fiction writers, such as Olaf Stapledon and Arthur C. Clarke. The Extraterrestrial Encyclopedia offers a wealth of information, never before available in a single volume: almost 1,900 informative entries cover a wide range of topics -- from serious science to pop culture.biographical profiles identify over 300 leading contributors in the field94 illustrations user-friendly cross-referencing makes navigating through the topics easyan extensive list of web sites guides further researcha detailed time line places the search for extraterrestrial life in historical perspectivea detailed table shows SETI (Search for Extraterrestrial Intelligence) programs from 1960 to the present

Acclaimed astrophysicist David Darling comes well-armed with both science and mysticism to provide a theory of consciousness and its final conclusion. His well -researched ideas on psychology, neuro-biology, quantum physics and a host of others meld with Zen mysticism to provide a step by step approach to what consciousness is, and what it is not. The urban myth of 'who we are' is peeled back to reveal a terrible-wonderful truth. We are a fragmented assortment of often biased memories held together by a selfish brain whose primary concern is its own immortality. So how does this amalgam of 'I' manage to create what is considered the highest life-form on earth? You start at conception, add some biology and evolutionary theory, and what emerges is an organism using its every meager power to construct its own unique reality. Or is it that unique? Are we truly disconnected from all those other 'unique realities' of the past, present and future? Darling launches into a frank discussion of consciousness. How each of our stories is pieced together from a constantly changing conglomerate of memories. It is these stories that make us who we are. If the memories are changed - we change. If they are erased then we are erased. Our consciousness lives and dies dependent on our memories. When the physical brain dies with the rest of the body what happens to 'us'? Do not look here for comforting ideas of lounging in heaven with friends and family. Darling also does not support utter annihilation. Darling instead shows where mysticism may provide some insight for science. A well-grounded theory emerges of what happens when you can no longer observe scientifically those moments beyond our last breath. Darling provides a compelling answer for what lies beyond the end as we know it. Darling has acquired a profound insight into the process of death and the many misconceptions we have about it. He systematically walks you through the scientific process of death as well as other scientific phenomenon and lets you see for yourself that there isn't a huge mystery behind it all. Darling doesn't give you the answer to "the great question," but points you in the correct direction with style. Darling uses logic to explain how quantum physics may be bound with personality, but never pretends that Zen can be explained rationally. This collection of thoughts is extremely well-organized and well-written. David Darling's book explains quantum mechanics in a way anyone can understand. He also presents an intelligent thesis on the nature of life after death. His answer may not be what we wish to hear, but it makes sense. Author Bio - David Darling is the author of more than 40 titles including narrative science titles: Megacatastrophes , We Are Not Alone, Gravity's Arc, Equations of Eternity, a New York Times Notable Book, and Deep Time. He is also the author of the bestseller-The Universal Book of Mathematics: From Abracadabra to Zeno's Paradoxes. Darling's other titles include The Universal Book of Astronomy, and The Complete Book of Spaceflight, as well as more than 30 children's books. His articles and reviews have appeared in Astronomy, Omni, Penthouse, New Scientist, the New York Times, and the Guardian, among others. David Darling was born in Glossop, Derbyshire, England, on July 29, 1953, and grew up in the beautiful Peak District, close to Kinder Scout for those who know the area. He went to New Mills Grammar School and then on to Sheffield University, where he earned his B.Sc. in physics in 1974, and Manchester University, for my Ph.D. in astronomy in 1977. David Darling's interests, apart from his work and family, include singing, song-writing, and playing guitar, walking, and travel.

You are roughly eighteen billion years old and made of matter that has been cycled through the multimillion-degree heat of innumerable giant stars. You are composed of particles that once were scattered across thousands of light-years of interstellar space, particles that were blasted out of exploding suns and that for eons drifted through the cold, starlit vacuum of the Galaxy. You are very much a child of the cosmos. In giving birth to us, the universe has performed its most astonishing creative act. Out of a hot, dense melee of subatomic particles - which is all that once existed - it has fashioned intelligence and consciousness. Some of those tiny, primordial pinpoints of matter from the infant cosmos have become temporarily arranged to make your brain and mine. Your thoughts at this very moment derive from energy transactions between particles born at the dawn of time. Somehow the anarchy of genesis has given way to exquisite, intricate order, so that now there are portions of the universe that can reflect upon themselves and ask: Why am I here? What is the purpose of life, consciousness, and reality? In posing these questions, we are, in a sense, the universe questioning itself - a most extraordinary realization. It helps dispel permanently the notion that we are irrelevant and insignificant in nature's broad scheme. The fact is, we stand at the known apex of cosmic evolution. Small though we may be physically, we are giants when measured on the scale of complexity. And it is that complexity, of our brains in particular, that is an essential prerequisite to awareness. Yet the universe did not set out to be aware. During the first few chaotic microseconds, when all the matter and energy there would ever be was erupting from the primeval fireball, there was no great plan to make conscious minds. Nature is congenitally blind. Evolution is not, and never was, a steady march toward a certain type of order, or life, or consciousness. There is no way of knowing in advance what forms nature will take, no favorites, no movement toward a predetermined goal. On the other hand, it is hard to believe that we are here by chance. Why are we aware? Key words - Death, Reincarnation, Consciousness, Cosmos, Science, Soul, Mind, Universe Author Bio - David Darling is the author of more than 40 titles including narrative science titles: Megacatastrophes , We Are Not Alone, Gravity's Arc, Equations of Eternity, a New York Times Notable Book, and Deep Time. He is also the author of the bestseller-The Universal Book of Mathematics: From Abracadabra to Zeno's Paradoxes. Darling's other titles include The Universal Book of Astronomy, and The Complete Book of Spaceflight, as well as more than 30 children's books. His articles and reviews have appeared in Astronomy, Omni, Penthouse, New Scientist, the New York Times, and the Guardian, among others. He went to New Mills Grammar School and then on to Sheffield University, where he earned his B.Sc. in physics in 1974, and Manchester University, for my Ph.D. in astronomy in 1977. David Darling's interests, apart from his work and family, include singing, song-writing, and playing guitar, walking, and travel.

Praise for David Darling The Universal Book of Astronomy "A first-rate resource for readers and students of popular astronomy and general science. . . . Highly recommended." -Library Journal "A comprehensive survey and . . . a rare treat." -Focus The Complete Book of Spaceflight "Darling's content and presentation will have any reader moving from entry to entry." -The Observatory magazine Life Everywhere "This remarkable book exemplifies the best of today's popular science writing: it is lucid, informative, and thoroughly enjoyable." -Science Books & Films "An enthralling introduction to the new science of astrology." -Lynn Margulis Equations of Eternity "One of the clearest and most eloquent expositions of the quantum conundrum and its philosophical and metaphysical implications that I have read recently." -The New York Times Deep Time "A wonderful book. The perfect overview of the universe." -Larry Niven
