Carburateurs Dell'Orto - Guide technique

Dellorto Motorcycle Carburetor Tuning Guide. 3.4. Idle systems. At idle the Carburetor supplies only the mixture required to keep the engine running at very moderate rpm. The engine needs only a small amount of air when idling and the throttle slide should therefore be almost completely closed. Upstream of the slide there is only a weak vacuum, insufficient to cause the main circuit to deliver any fuel emulsion, while downstream of the slide there is a stronger vacuum which activates the ...

Tuning Manuals Archives - Eurocarb

A reasonable idle speed for a modified engine on Dellortos is between 900 and 1100 RPM. If you are adjusting the idle for a set of carbs already fitted then progress to the second stage. If the carbs are being fitted for the first time, screw all of the idle mixture adjustment screws fully home and then out 2.5 turns.
