Dimethyl sulfoxide is an organosulfur compound with the formula (CH<sub>3</sub>)<sub>2</sub>SO. This colorless liquid is an important polar aprotic solvent that dissolves both polar and nonpolar compounds and is miscible in a wide range of organic solvents as well as water. It has a relatively high boiling point. DMSO has the unusual property that many individuals perceive a garlic-like taste in the mouth after contact with the skin. In terms of chemical structure, the molecule has idealized C<sub>s</sub> symmetry. It has a tri
