Discrete components are electronic components with just one circuit element rather than an integrated circuit. The

A discrete circuit is constructed of components which

are manufactured separately. Later, these components are connected together by using conducted wires on a circuit board or a printed circuit board. The transistor is one of the primary components used in discrete circuits, and combinations of these transistors can be used to create logic

Difference Between Discrete Circuits And Integrated Circuits

Most analog electronic appliances, such as radio receivers, are constructed from combinations of a few types of basic circuits. Analog circuits use a continuous range of
