As markets become more dynamic and competitive, companies must reconsider how they view inventory and make changes to their production and inventory systems. They must begin to think outside the classical box and develop a new paradigm of inventory management. Exploring the trend away from classical models based on economic order quantities to dependent demand systems, *Inventory Management: Non-Classical Views* comes as a just-in-time resource. Explore the new role of inventories in business enterprises. This book discusses a new paradigm for inventory management that is responsive to dynamic changes in the economy. It explores: Inventory systems that provide flexibility Inventory performance measures other than using cost as a means to control inventory Inventory as a contributor to customer value creation, rather than a liability The book also examines why energy and the environment are to be considered in inventory decisions, the non-classical application of inventory management in fields such as healthcare and disaster relief, and non-classical approaches to measuring the performance of inventory such as information theory, fuzzy sets, and thermodynamics. While many factors may change, one certainty is that the global economy is becoming increasingly dynamic. Planting the seeds for new research in inventory control and management, this book outlines the evolving role of inventories in business enterprises. It explores how to create inventory management as a tool for continued success regardless of market fluctuations and economic variances.

This easy-to-understand, user-friendly reference tool covers the three major decision-making areas in financial management: the investment, financing, and asset management decisions. It enables readers to understand the financial decision-making process, interpret the impact that financial decisions will have on value creation, and develop a strong understanding of how funds are raised and allocated by today's businesses. Financial exploration includes the basic time value of money concepts, working capital management, capital budgeting techniques, estimating cash flows, electronic commerce, outsourcing, limited liability companies, strategic alliances, and financial statement analysis. For participants in management development programs, candidates preparing for various professional exams, and practicing finance professionals—such as Financial and Loan Analysts; Financial, Cash, and Credit Managers; Controllers, Managerial Accountants; Lending Officers, and Treasurers.
