The author of *Race for Profit* carries out “[a] searching examination of the social, political and economic dimensions of the prevailing racial order” (Michelle Alexander, author of *The New Jim Crow*). In this winner of the Lannan Cultural Freedom Prize for an Especially Notable Book, Keeanga-Yamahtta Taylor “not only exposes the canard of color-

blindness but reveals how structural racism and class oppression are joined at the hip” (Robin D. G. Kelley, author of *Freedom Dreams*). The eruption of mass protests in the wake of the police murders of Michael Brown in Ferguson, Missouri, and Eric Garner in New York City have challenged the impunity with which officers of the law carry out violence against black people and punctured the illusion of a post-racial America. The Black Lives Matter movement has awakened a new generation of activists. In this stirring and insightful analysis, activist and scholar Keeanga-Yamahtta Taylor surveys the historical and contemporary ravages of racism and the persistence of structural inequality, such as mass incarceration and black unemployment. In this context, she argues that this new struggle against police violence holds the potential to reignite a broader push for black liberation. “This brilliant book is the best analysis we have of the #BlackLivesMatter moment of the long struggle for freedom in America. Keeanga-Yamahtta Taylor has emerged as the most sophisticated and courageous radical intellectual of her generation.” –Dr. Cornel West, author of *Race Matters* “A must read for everyone who is serious about the ongoing praxis of freedom.” –Barbara Ransby, author of *Ella Baker and the Black Freedom Movement* “[A] penetrating, vital analysis of race and class at this critical moment in America’s racial history.” –Gary Younge, author of *The*

Increasing interest has been emerging in the last decade in the field of signal recognition and transduction. This is particularly true for animal systems where an impressive amount of literature is appearing and where many important pathways have been clarified at a molecular level. In the elucidation of the functions of single components of a given pathway, gene cloning has played a major role and opened the field to the genetic engineering of these complex systems. At variance with this situation, plant systems are less well elucidated, even if in recent years exciting research of developments have been initiated especially with the view toward the most promising role plants in biotechnology. Recent studies have elucidated some of the events involved in the perception of the plant hormone signals and some steps concerning its transduction. Only for three of the five hormones in plants, namely auxin, ethylene and cytokinins, have specific receptors been isolated. The use of classical molecular approaches, together with the more recently isolated mutants, have produced crucial information on receptors and

shed light on possible transduction pathways. As in the case of red light, more than one pathway can be triggered by one specific signal. Many systems involved in animal signaling are now shown to be present also in plants, and in view of the fast progress in this area, it will be possible in the near future to fully describe the content of the "black boxes" in the reaction chain specifically triggered by a signal.

In 900 text pages, Campbell Biology in Focus emphasizes the essential content and scientific skills needed for success in the college introductory course for biology majors. Each unit streamlines content to best fit the needs of instructors and students, based on surveys, curriculum initiatives, reviews, discussions with hundreds of biology professors, and careful analyses of course syllabi. Every chapter includes a Scientific Skills Exercise that builds skills in graphing, interpreting data, experimental design, and math-skills biology majors need in order to succeed in their upper-level courses. This briefer book upholds the Campbell hallmark standards of accuracy, clarity, and pedagogical innovation.

This workbook offers a variety of activities to suit different learning styles. Activities such as modeling and mapping allow students to visualize and understand biological processes. New activities focus on reading
