The AIDS epidemic, caused by HIV, found its way to the United States as early as 1960, but was first noticed after doctors discovered clusters of Kaposi's sarcoma and pneumocystis pneumonia in gay men in Los Angeles, New York City, and San Francisco in 1981. Treatment of HIV/AIDS is primarily via a "drug cocktail" of antiretroviral drugs, and education programs to help people avoid infection. Initially, infected foreign nationals were turned back at the U.S. border to help prevent additional inf

### HIV/AIDS in the United States - Wikipedia

The affected community is composed of people who are living with HIV and AIDS, plus individuals whose lives are directly influenced by HIV infection. This originality was defined as young to middle aged adults who associate with being gay or bisexual men, and or injection drug users. HIV-affected community is a community that is affected directly or indirectly affected by HIV. These communities are usually influenced by HIV and undertake risky behaviours that lead to a higher chance of HIV infect
