India's history and culture is ancient and dynamic, spanning back to the beginning of human civilization. Beginning with a mysterious culture along the Indus River and in farming communities in the southern lands of India, the history of India is punctuated by constant integration with migrating peoples and with the diverse cultures that surround the country. Placed in the center of Asia, history in India is a crossroads of cultures from China to Europe, as well as the most significant Asian connection with the cultures of Africa. The Historical Dictionary of Ancient India provides information ranging from the earliest Paleolithic cultures in the Indian subcontinent to 1000 CE. The ancient history of this country is related in this book through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on rulers, bureaucrats, ancient societies, religion, gods, and philosophical ideas.

?Construction Project Management provides a thorough understanding of construction project management techniques with the help of various concepts, practical insight, real-life examples and skills to execute large and small projects. Controlling Project Construction Plan Focusing on project planning, scheduling and controlling techniques, the 3rd Edition covers the practical application of the knowledge and skills required to plan and control construction project scope, time, resources, cost, risk and integration using project management technique.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

This work covers such topics as: EU directives and harmonization work; health, safety and environment; recent technical development - products and processes; shot hole development; and management of blasting operations.

In a culture where the media provide a steady diet of stories of conflict, this collection is among the first to study the phenomenon of conflict itself as well as its relationship with the media. Mary S. Mander's introduction provides an intellectually rich foundation for this diverse exploration of the nature and implications of studying media and social conflict. Contributors address such topics as the black press and the black community, industrial and institutional control of television programming, and media depictions of police-mediated hostage negotiation. Framing Friction is both a comparison of current modes of communications research and a persuasive call to move beyond conceiving of conflict as a state of dysfunction. These essays bring a new and invigorating perspective to the role of conflict, describing it as a constructive rather than a destructive social force.

God created animals with everything they needed. To be content and succeed, He designed homes perfectly suited to each one. However, the animals were unhappy with the places that God had made for them and eventually gave into the insecurities and fears they all felt. Owl was frightened of the dark, Mountain Goat became faint-hearted as he looked down from the narrow mountain ledge. Duck panicked

every time she neared the water. Camel detested the hot, dry wind and Penguin hated the icy cold. Through whimsical illustrations and creative prose, " God Gave Me Everything I Need To Be Me! " encourages self acceptance, individuality and appreciation as the animals finally realize God had given them exactly what each one required to make them complete.

How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.
