This is the first book I came across that treats both the evolutionary algorithms (GA) and the stochastic search methods. Recursive Linear Estimator (e.g. Kalman Filter), Markov Chain Monte Carlo (e.g. Metropolis-Hastings, Gibbs), and Reinforcement Learning, are some of the stochastic material discussed.

Introduction to Stochastic Search and Optimization:

Genetic Algorithm (GA) is a stochastic search algorithm based on the mechanics of evolution and natural selection. During the search process, a population of design points is sampled simultaneously. Members of this population then compete with one another to participate in the next generation of the process.

Stochastic optimization (SO) methods are optimization methods that generate and use random variables.For stochastic problems, the random variables appear in the formulation of the optimization problem itself, which involves random objective functions or random constraints. Stochastic optimization methods also include methods with random iterates.
