There are two local anesthetic agents used in dentistry that reportedly induce methemoglobinemia. The first agent is the topical local anesthetic benzocaine and the second agent is the injectable (and topical) local anesthetic prilocaline. The mechanism of action is that both of these anesthetics oxidize hemoglobin to methemoglobin.

[Local Anaesthesia In Dentistry 7e \[EBOOK\]](#)

Local anaesthesia is a numbing agent that soothes your tissues during a medical or dental procedure. It has a numbing effect on the peripheral or externally lying nerves of your body. Local anesthesia penetrates your skin and deeper tissues in a small area. Hence, the name local anaesthesia is appropriate as it does not affect your brain or spinal cord.
