Operations Management in the Supply Chain: Decisions and Cases is an ideal book for the instructor seeking a short text with cases. This book employs a cross-functional perspective that emphasizes strategy and critical thinking, appealing to non-majors and practical for use in an MBA level or undergraduate course in operations management. The size and focus of the book also make the text attractive for the cross-functional curriculum where students are required to purchase more than one text. and ethical choices. Through case studies and the analysis of policy and practice drawn from a number of countries, the authors describe an approach to public provision for children which they term 'children's services'. They then propose an alternative approach named 'children's spaces', and go on to consider an alternative theory, practice and profession of work with children: pedagogy and the pedagogue. This ground breaking book will be essential reading for tutors and students on higher education or in-service courses in early childhood, education, play, social work and social policy, as well as practitioners and policy makers in these areas.
