A coronary angioplasty is performed using local anaesthetic, which means you'll be awake while the procedure is carried out. A thin flexible tube called a catheter will be inserted into one of your arteries through an incision in your groin, wrist or arm. This is guided to the affected coronary artery using an X-ray video.

## **Harrold Medical Practice**

From the inception of coronary angioplasty in 1977 to 1995, worldwide volume of PTCA reached 900 000 cases. 1 As with any therapy, it is of great importance to be able to continually assess the outcomes of patients undergoing treatment with PTCA. Yet over time, patient selection, techniques, and equipment for percutaneous coronary revascularization evolve at a faster rate than clinical trials are able to incorporate these changes into controlled studies.

## **Practice of Coronary Angioplasty in California in 1995 ...**

Coronary angioplasty is a procedure to open up narrowed or blocked arteries in your heart. This allows blood to flow more easily and supply your heart muscle with the oxygen it needs. Coronary angioplasty may be used to treat your symptoms if you have angina.
