Online Library Pulmonary Involvement In Patients With Hematological Malignancies

One or more causes of lung involvement were documented in 91 of 118 patients (77.1%) and included infection (n = 52), pulmonary edema (n = 34), and malignancies (n = 22 [mostly lymphoma]). HLH-specific treatment combined with treatment of the cause of lung involvement improved respiratory function in only 67 of the 188 patients (56.7%).

Pulmonary Involvement in Patients With Hemophagocytic ...

Fifteen patients (14%) were identified to have pulmonary involvement. Pulmonary artery aneurysms (PAA) was observed in six patients, and all of them had concomitant thrombi, attenuation or occlusion of PAs, and five of them also had radiographic parenchymal changes. Three patients had solely pulmonary artery thrombus (PAT) without PAA.

Pulmonary involvement in patients with Behçet's disease ...

Coronavirus disease 2019 (COVID-19) is a global pandemic caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), characterised by prominent pulmonary involvement.¹ Preliminary pathological findings demonstrate lung oedema, thickening of alveolar septa, inflammatory infiltrates and vascular congestion also in the early phase of the disease.² Similarly, chest computed tomography (CT) studies showed lung abnormalities in asymptomatic SARS-CoV-2-infected individuals.³ Lung ...

Pulmonary hypertension and right ventricular involvement ...

Results. Dyspnea and cough were the most common onset symptoms. Radiographs revealed interstitial infiltrates with centrilobular nodules, ill-defined consolidation, or localized ground-glass opacities. Pleural effusions and mediastinal lymphadenopathies were found in approximately one-half of the patients. One or more causes of lung involvement were documented in 91 of 118 patients (77.1%) and included infection (n = 52), pulmonary edema (n = 34), and malignancies (n = 22 [mostly lymphoma]).

Pulmonary Involvement in Patients With Hemophagocytic ...

Disease activity was assessed using the 28-joint indices score (DAS28). Hand and wrist X-rays were evaluated using Larsen's criteria. Pulmonary functional tests (PFTs) were performed in 32 patients. The patients and 18 non-smokers healthy individuals were assessed by plain chest X-ray (CXR) and HRCT of the lungs.

Pulmonary involvement in patients with early rheumatoid ...

Pulmonary involvement in patients with early rheumatoid arthritis. Lung abnormalities are frequently observed in patients with early RA on HRCT, even when CXR and PFTs are normal. Limited areas of GGOs were the abnormalities depicted exclusively in patients.

Pulmonary involvement in patients with early rheumatoid ...

The CT score of non-GGO lesions was used to evaluate residual pulmonary involvement. This was because an extended GGO area with decreased density may have occurred in some patients after discharge, and GGO is even a basic manifestation of convalescence, which could have led to over-estimation of the CT scores.

The pulmonary sequelae in discharged patients with COVID ...

Pulmonary involvement was considered when patients presented with ? 1 clinical or radiologic symptom among the following: respiratory rate > 30 breaths/min, dyspnea, cough, hemoptysis, respiratory distress, abnormal lung auscultation, radiologic abnormalities on chest radiograph and/or high-resolution CT scan, oxygen need, and mechanical ventilation requirement.

Pulmonary Involvement in Patients with Hematological ...

Pulmonary disease has been encountered and documented in all portions of the respiratory tract of IBD patients although the dominant sites of involvement are the airways. It is not uncommon to find disease in multiple sites in the same patient. Respiratory abnormalities are discussed by location below:

Pulmonary Involvement in Inflammatory Bowel Disease ...

Pulmonary involvement in mixed connective tissue disease (MCTD) is common, frequently severe, and is often clinically inapparent and variably responsive to corticosteroid/cyclophosphamide treatment. Serial pulmonary evaluation of patients with MCTD is important, since deterioration, as in the diffusing capacity over time, may alert the physician to the need for more invasive evaluation.

A prospective evaluation emphasizing pulmonary involvement ...
