Ancillary Equipment and Electrical Equipment is a component of Encyclopedia of Water Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The volume presents state-of-the art subject matter of various aspects of Ancillary Equipment And Electrical Equipment such as: Seawater Supply Pump; Cooling Water Recirculation Pump; Brine Recirculation Pump; Brine Blowdown Pump; Brine Heater Condensate Pump; Minor Pumps For Desalination Plants; The Installation Criteria And The Layout; Hydraulic Aspects In Design And Operation Of Axial-Flow Pumps; Description Of Surface Vortices With Regard To Common Design Criteria Of Intake Chambers; Vacuum Creating Equipment; Filtering Equipment; Chemical Dosing Stations; On-Load Sponge Ball Cleaning System; Power Supply Systems And Electrical Equipment For Desalination Plants; Composite Materials For Pressure Vessels And Pipes; Thermal Stresses In Vessels, Piping, And Components; Pressure Vessels And Piping Systems; Reliability, Risk And Safety Assessment; Pressure Vessels And Shell Structures; Pipeline Operations; Steel And Pipe Mill Technology; Pipeline Structural Integrity; Pipeline System Automation And Control; Pump And Compressor Operation; Environmental Conservation Practices For Pipelines. This volume is aimed at the following five major target audiences: University and College Students Educators, Professional Practitioners, Research Personnel and Policy and Decision Makers

The new 6th Edition of this popular market report will be published by the end of December. Brought to you by the team behind Pump Industry Analyst, Profile of the International Pump Industry: Market Prospects to 2010, reviews the markets and major manufacturers of industrial pumps. The report includes a detailed five-year review of mergers and acquisitions, and a Top 20 Table, ranking the leading pump manufacturers by estimated pump sales. Market estimates and forecasts to 2010 are presented by region and pump type, along with profiles of 50 leading international pump manufacturers. Reviews the markets and major manufacturers of industrial pumps Includes a five-year review of mergers and acquisitions including a Top 20 Table Provides market estimates and forecasts to 2010 Presents profiles of 50 leading international pump manufacturers

This five-volume series covers the entire range of technologies used in the petroleum refining industry. The books are intended for students and for the engineers and technicians who operate in refineries.This volume is devoted to the main equipment used in a refinery or a petrochemical complex, classified by technology. The basic principles for design and sizing are presented for each type of equipment. The details of practical implementation are also discussed with a view to maximum efficiency. Equipment selection criteria are provided for specific applications. Lastly, emphasis is placed on the major trends in equipment development.Contents: I. Separation technologies. 1. Gas-liquid contactors for distillation: plate columns. 2. Gas-liquid contactors for distillation: packed columns. 3. Solvent extraction equipment. 4. Techniques for physical separation of phases. II. Heat transfer technologies. 5. Process furnaces. 6. Heat exchangers. III. Reaction technologies. 7. Chemical reactor technology. IV. Mechanical operations. 8. Pumps, compressors, turbines and ejectors. 9. Agitation and mixing techniques. V. Control and optimization techniques. 10. Control and Monitoring. 11. Rational use of energy. References. Index.
