Two very special right triangle relationships will continually appear throughout the study of mathematics: In an isosceles right triangle, the angle measures are 45°-45°-90°, and the side lengths create a ratio where the measure of the hypotenuse is sqrt (2) times the measure of each leg as seen in the diagram below.

**Special Right Triangles (Fully Explained w/ 19 Examples!)**  
 In geometry, special right triangles are great to work with because the ratio of their sides will always be the same, making calculations easier. The two special triangles you need to know are the isosceles (or 45-45-90) and 30-60-90 right triangles. You can use your knowledge of special right triangles to answer the following questions.
