The plate facility is used to produce plates out of slabs produced from the continuous casting plant. We have a substantial competitive edge in plate manufacturing facilities, including the accelerated cooling and heat treatment facilities required to produce high quality steel.

This book explores the principles of supply-side structural reform and current practices in the Chinese steel industry. Focusing on the general requirements for high-quality development, it reviews the evolution of the global and Chinese steel industries with regard to reduction, innovation, and transformation. It also summarizes industrial development law from a transfer route perspective, analyzes major challenges and opportunities for the steel industry in the new era, and proposes strategic orientation and implementation measures for the future development of the steel industry. The book contends that high-quality development of the steel industry must be driven by innovation, and it is essential to promote integrated development based on several aspects - greenness, coordination, quality, standardization, differentiation, service, intelligence, diversification, and internationalization - in order to reshape the industrial value chain and continuously improve industrial competitiveness. This concept is essential to help Chinese steel companies prepare development plans for transformation and upgrading. Combining thorough analysis, unique insights, and many practical cases, the book offers a guide to and inspiration for future implementation approaches.

This title seeks to understand what a successful country like South Korea does after it has attained 'development' and economic maturity. It looks at Korea and Asian regionalism; Korean business and innovation strategies in Asia; and Asian migration and immigrants in Korea.

The POSCO Strategy brings to life one of the world's great industrial success stories. Expertly told by William T. Hogan, an accomplished commentator on the global steel industry, the work traces the meteoric rise of South Korea's Pohang Iron and Steel Company and the incredible impact it has had on this small agrarian country. In a mere quarter of a century POSCO has grown to become the largest steel company in the world and has dragged South Korea into the industrial age. The book not only provides a blueprint for the world's steel industry but offers an incredible case study to students of modern Asian economic history seeking to understand how a non-industrialized economy can be so dramatically modernized by the development of a single industry.

A new breed of powerhouse companies from the emerging markets is catching their Western competitors off-guard. Household names of today - IBM, Ford, Wal-Mart - are in danger of becoming has-beens as these more innovative superstars rise to dominance, representing both an urgent competitive challenge and an unprecedented investment and business opportunity. Understanding how they have become world-class market leaders - and where they are going next - is crucial to an understanding of the future of globalization. Training his brilliant investor's eye on the top twenty-five of these emerging market companies, visionary international investment analyst Antoine van Agtmael takes readers into the boardroom suites and labs where they are outmanoeuvring their Western competitors. He reveals how these companies have made it to the top of the global heap, profiling major players such as China's Haier appliance manufacturer; Korea's Samsung; Brazil's Embraer jet maker; and India's Infosys. Divulging their strategies for future growth, he analyses how their rise to prominence will change our lives. His unique insights reveal both how we in the West can capitalize on the opportunities these companies represent while also mobilizing a powerful response to the challenges they present.
