

Word Problems Involving Consecutive Integers Algebra 1 Homework Answers

As recognized, adventure as well as experience about lesson, amusement, as without difficulty as conformity can be gotten by just checking out a book word problems involving consecutive integers algebra 1 homework answers also it is not directly done, you could take even more roughly speaking this life, approaching the world.

We come up with the money for you this proper as without difficulty as easy exaggeration to acquire those all. We manage to pay for word problems involving consecutive integers algebra 1 homework answers and numerous ebook collections from fictions to scientific research in any way. among them is this word problems involving consecutive integers algebra 1 homework answers that can be your partner.

Solution : Let x , $(x + 1)$ and $(x + 2)$ be the first three consecutive integers. The sum of the squares of first and the product of the other two is 154. $x^2 + (x + 1)(x + 2) = 154$. $x^2 + x^2 + 2x + 1x + 2 = 154$. $2x^2 + 3x + 2 = 154$. $2x^2 + 3x + 2 - 154 = 0$. $2x^2 + 3x - 152 = 0$. $(2x + 19)(x - 8) = 0$.

Solving Word Problems Involving Consecutive Integers

What are consecutive integer problems? Consecutive integer problems are word problems that involve consecutive integers. Consecutive integers are integers that follow in sequence, each number being 1 more than the previous number, represented by n , $n + 1$, $n + 2$, $n + 3$, ..., where n is any integer. For example: 23, 24, 25, ...

In solving this kind of problems, when both the smaller and larger integers are less than 18, always we have to take the larger integer to form inequality. Then, we have. $x + 2 < 18$. Subtract 2 from each side. $x < 16$ ----- (1) Given : Sum of the integers is more than 20. Then, we have. $x + (x + 2) > 20$. $x + x + 2 > 20$.

Solving Linear Inequalities in One Variable Word Problems

You subtract, bring down the next 4. 4 goes into 4 one time. You get no remainder. So x is equal to 31. So x is the smallest of the four integers. So this right over here, x is 31. x plus 2 is going to be 33. x plus 4 is going to be 35. And x plus 6 is going to be 37. So our four consecutive odd integers are 31, 33, 35, and 37.
